Full Stack Web-Developer

About me :

I am a Full-Stack Web Developer based in Bangalore (Karnataka, India) and I work in JavaScript, I have been learning the language for a year now. So far I have made several applications using the JS as my primary language along with other development libraries and tools.

I love coding and I am looking forward to work as a skilled Web-Developer. I pride myself as a dedicated learner and will love to utilise my skills for greater purpose, delivering best of my performance. I aim to utilise my ideas and qualitative skills for the benefits of me, my team and overall development of the organization.

Work & Projects :

• Portfolio Website

My portfolio as my first project which I build from scratch. The design is kept minimalistic with basic HTML, where I have used Tailwind with CSS for styling with animations. On top of that I have used JavaScript for responses. Also SMTP server connected to the message section personally connecting to me.

• JavaScript Projects

I learned JavaScript as my first programming-language, here I have some task oriented web-applications built on JavaScript which showcases my work. As a JS Developer I have focused on to write better and optimised code using concepts like Query-Selector, Event-Loops, Event Listeners, Set, Map, Closures, Promises among others. This collection contains my work on JavaScript.

March 2023 | [github.com/Arpitxd41/javascriptAssignments](#)

• React Projects

Project using the React UI Development Library. I also learned about Rendering, Scripting and Component Based Architecture through ReactJS, which useState, Hooks, useEffects are some of the concepts that I have explored in these projects.

• Work on Tailwind

I have cloned some websites using TailwindCSS framework which is known for better control in styling from within the element. It can also be used along with stylesheet, However my work on cloning is limited only to the tailwind. It can be used for efficient styling and making websites better & faster.

Oct-Dec 2022 | [github.com/Arpitxd41/Work_in_Tailwind](#)

• Work on HTML & CSS

Projects purely based on HTML & CSS, building different web-pages. With the use of concepts of screen responsiveness, box model, grid, ex along with selectors of css and hover action etc .

• Wireless Power Transmission: Using-Inductive Resonant Coupling

Led our Major Project under Dept. of Electrical Engineering in the team of 7 aspiring engineers. This Project was developed by us as a sophisticated modern day power-transmission system with Solar Energy as the Source of power, also for transimission within a limited range induction-coupling method was applied. For further long range Distribution we also worked in Resonance model.

Oct 2017-Mar 2018 | Department of Electrical Engineering, GEC-Bsp

• Automated Control System: Using-ECR Logic Applications

This is a Unisex Sports Wear selling Full SStack e-Commerce Web Site I have built. Used JASON Web Token for Authenticaution and Role Management. User and Admin dashboard is present in the frontend with backend check for Admin Routes.
